

AI Engineer

Location: Prague

HO: 99 %

Type of cooperation: Bodyshop

Language: ENG C1

Project information

Project Eclipse

AI Role focused on FastMCP servers with workflow management, Redis state persistence, and enterprise-grade security integrations for the Eclipse AI platform.

About the Role:

We're looking for a skilled AI Engineer to help build and maintain production-ready AI agent workflows.

This role requires high code quality, strong testing practices, and close collaboration with the AI platform and downstream delivery teams.

Must have skills

Requirements:

Bachelor's or Master's degree in Computer Science, Data Science, or a related field.

Strong software engineering expertise in Python, with a focus on FastAPI, Pandas, and NumPy.

Experience with Retrieval Augmented Generation (RAG).

Proficiency in Prompt Engineering.

Knowledge of vector databases and embedding models.

Experience with LangChain and LangGraph.

Experience with FastMCP.

Hands-on experience with Azure cloud services, including Azure Functions.

Ability to work with large datasets and perform data cleaning, transformation, and manipulation.

Experience with version control, small and regular commits, unit tests, CI/CD, packaging, and Docker.

Strong analytical thinking and creative problem-solving skills.

Good communication skills for collaborating with cross-functional teams and stakeholders.

Nice to have skills

Experience with multi-agent libraries/frameworks like CrewAI, Autogen, and Taskweave is a plus.

Understanding of data engineering concepts, including data pipelines, data integration, and data warehousing is a plus.

Knowledge of AI ethics, bias mitigation, and responsible AI practices is a plus.

< technology >

Benefits

Fully remote, with possible occasional in person team sessions / workshops / gatherings (i.e. 1x quarter) likely to take place in Prague
