

Servando Torres

AI Engineer | Python, FastAPI & Workflow Automation

- Email: servandotorresga@gmail.com
- GitHub: github.com/Servando1990
- LinkedIn: linkedin.com/in/servando-torres-239a26b0
- Website: www.controlthrive.com
- Location: Amsterdam

Professional Summary

AI engineer with 8+ years building Python-first systems for document understanding, matching, scoring, and research workflows. Strong on FastAPI, Pydantic contracts, prompt engineering, retrieval-style applications, and turning messy business data into production tools. Comfortable owning the engineering details while working directly with clients, operators, and cross-functional teams.

Technical Focus

- Python application development with FastAPI, Pydantic, packaging, and API design
- Prompt engineering, structured extraction, RAG-style applications, and LLM-assisted reasoning
- Workflow orchestration with Prefect and test coverage with pytest
- Data cleaning, transformation, ranking, and analysis across PDF, CRM, and tabular inputs using Pandas, NumPy, and SQL
- Full-stack delivery across React, Vercel, cloud storage, and backend services

Professional Experience

controlthrive

Founder & Principal AI Engineer

April 2023 - Present

Remote

- Built an investor-matching platform for MVV Capital Partners in a Python codebase using Prefect flows and tasks, FastAPI endpoints for local workflows, Vercel serverless routes for production, and S3-based document ingest. The platform combines deterministic eligibility and fit scoring with LLM-based notes reasoning to produce ranked investor shortlists and export-ready outreach outputs.
- Designed prompt-driven extraction and notes-analysis services with strict data contracts, helping keep outputs more explainable, reviewable, and easier to test.
- Developed standalone extraction services and technical POCs with FastAPI and PydanticAI for structured PDF and contract analysis.
- Built a RAG chatbot application using Metaflow, OpenAI, FastAPI, and JavaScript frontend components.
- Built an earnings-call dashboard with FastAPI and React to process audio and transcript data for 500+ companies and surface synchronized sentiment signals for research teams.

Fintonic

Senior Machine Learning Engineer | Lending

October 2022 - February 2023

Barcelona, Spain

- Streamlined backend data pipelines and model-serving workflows with FastAPI and MongoDB, while partnering with Product, UX, and Risk teams on lending and fraud systems.

KPMG

Customer-Facing Data Scientist

June 2022 - October 2022

Barcelona, Spain

- Delivered customer-facing machine learning solutions, including Azure-based recommender work in enterprise settings.

Additional Background

- Optimized NLP pipelines in Databricks on Azure and worked across AWS and GCP environments on applied ML systems.
- Work comfortably in Git-based engineering workflows with unit tests, lightweight packaging, and documented deployment processes.

Education

Master's Degree in Data Science
Universidad de Zaragoza

Tools

Python, FastAPI, Pydantic, PydanticAI, Prefect, Pandas, NumPy, SQL, pytest, Docker, GitHub Actions, Azure, AWS, GCP, Metaflow, React, TypeScript
