- www.controlthrive.com

Summary

Senior software engineer with nearly a decade building backend, ML, and AI application systems across consulting, fintech, and founder-led product delivery. Strong in Python-first platforms, AI workflows, agentic and context-rich systems, structured extraction, ranking and reasoning pipelines, and bringing AI into production through reliable backend services, reusable orchestration, and cross-functional delivery with product, ML, and data teams.

Core Capabilities

- AI application workflows, agentic systems, context engineering, retrieval-style applications, orchestration
- Python backend engineering with FastAPI, Pydantic, APIs, cloud services, and workflow platforms
- Production AI delivery across Prefect, Metaflow, Docker, Kubernetes, AWS, GCP, and Azure
- Reliability, explainability, and operational visibility through testable contracts, benchmark harnesses, and run artifacts

Experience

controlthrive

Founder & Principal AI Engineer
Apr 2023 - Present

- Designed and shipped an AI-assisted investor matching platform that turns PDFs and CRM history into ranked shortlists through a four-stage pipeline combining hard exclusions, deterministic scoring, and LLM-based notes reasoning.
- Built the platform as a serverless BFF with React/Vercel on the frontend, Prefect-orchestrated backend workflows, Pydantic contracts, and S3-based ingest, with benchmark and replay tooling to improve reliability, explainability, and iteration speed.
- Developed agentic and context-heavy AI components using PydanticAI, search-intent resolution, CRM-backed reasoning, and production-shaped evaluation flows.
- Built a FastAPI and React earnings-call intelligence product processing transcript and audio signals across 500+ companies, with cached inference, synchronized sentiment timelines, and analyst-facing alerting.
- Built pricing systems for client work using Metaflow, quantile regression, and Lagrangian optimization to support production recommendation workflows.

Fintonic

Senior Machine Learning Engineer | Lending

Oct 2022 - Feb 2023
Barcelona, Spain

- Improved lending and fraud workflows in collaboration with Product, UX, and Risk teams, and streamlined backend services and model deployment with FastAPI, MongoDB, Kubernetes, AWS, and SageMaker.

KPMG

Customer-Facing Data Scientist
Jun 2022 - Oct 2022
Barcelona, Spain

- Built a cash-flow forecasting model for an oil and gas client and led development of an Azure-based recommender system for a pharmaceutical engagement.

- Led client-facing data science work end to end, translating stakeholder needs into practical analytics and machine learning solutions.

Minsait

Senior Data Scientist | Product

Jan 2020 - Jun 2022

Madrid, Spain

- Developed computer vision projects based on image segmentation with satellite data.
- Presented data strategy recommendations to multiple audiences, including C-level stakeholders.

PwC

Data Scientist | Consulting

Nov 2018 - Jan 2020

Madrid, Spain

- Delivered analytics and machine learning solutions for consulting clients across industries, with a strong focus on decision support and stakeholder communication.

Orange

Data Analyst

Oct 2017 - Nov 2018

Madrid, Spain

- Turned complex datasets into actionable business insights that informed strategic decisions and operational efficiency initiatives.

Open Source

- Authored recsys-metaflow, an open-source Metaflow recommendation system built at controlthrive in collaboration with Outerbounds, using graph-based product relationships, random-walk sequence generation, Word2Vec embeddings, and matrix factorization.

Education

Master's Degree in Data Science

Universidad de Zaragoza
