- Location: Amsterdam

Professional Summary

Senior ML engineer with 8+ years building Python-first machine learning, data, and decision systems across finance, lending, pricing, and entity-resolution workflows. Strong in turning ambiguous research ideas into production-grade components with clear data contracts, validation paths, workflow orchestration, and operator-facing tooling. Recent work spans Databricks/PySpark pipelines, FastAPI services, Prefect and Metaflow workflows, and financial analytics products where reproducibility, reliability, and performance matter.

Core Capabilities

- Python engineering with FastAPI, Pydantic, Pandas, NumPy, packaging, and testing
- Databricks and PySpark pipelines for matching, validation, and multi-source data processing
- ML lifecycle design across feature pipelines, train/validation/test flows, deterministic evaluation, and versioned configuration
- Production delivery with Prefect, Metaflow, serverless/API deployment patterns, S3, and AWS tooling
- Finance and time-sensitive systems spanning earnings-call analytics, lending risk, pricing optimization, and investor-ranking workflows

Professional Experience

controlthrive

Founder & Principal AI Engineer

April 2023 - Present

Remote

- Build production-grade ML and AI systems end to end for finance, SaaS, and data-intensive clients, from problem framing and feature design through deployment, iteration, and operational support.
- Built an AI-assisted investor-matching platform for MVV Capital Partners that converts deal materials and CRM data into ranked investor shortlists using deterministic scoring, notes-based reasoning, Prefect orchestration, and a benchmark harness with snapshots, manifests, lineage artifacts, and reproducible run paths.
- Built a FastAPI and React earnings-call intelligence product for a financial research client to process transcript and audio signals across 500+ portfolio companies, returning cached, timestamp-linked sentiment time series and alerts for portfolio managers.
- Built a dynamic pricing system using Metaflow workflows, quantile regression, demand-curve prediction, constraint handlers, and Lagrangian optimization to generate production pricing recommendations, contributing to 35% revenue growth and 25% sales growth.
- Delivered a Spark-based account-matching engine in a Databricks/PySpark environment that normalized multi-source records, applied blocking keys, weighted scoring, and manual-review routing, helping reduce 200,000 problematic CRM records by 70% and save +1 FTE of manual effort.

Fintonic

Senior Machine Learning Engineer | Lending

October 2022 - February 2023

Barcelona, Spain

- Worked with Product, UX, and Risk teams on lending and fraud workflows, and streamlined backend data services and model-serving paths using FastAPI, MongoDB, Kubernetes, and AWS/SageMaker.

KPMG

Customer-Facing Data Scientist

June 2022 - October 2022

Barcelona, Spain

- Delivered enterprise ML solutions, including recommender work in Azure environments, translating stakeholder requirements into production-ready analytics systems.

Minsait

Senior Data Scientist | Product

January 2020 - June 2022

Madrid, Spain

- Developed computer-vision and analytics work, including image-segmentation projects with satellite data, and presented data strategy recommendations to technical and executive stakeholders.

PwC

Data Scientist | Consulting

November 2018 - January 2020

Madrid, Spain

- Delivered analytics and machine learning solutions for consulting clients across industries, with a strong focus on decision support and stakeholder communication.

Orange

Data Analyst

October 2017 - November 2018

Madrid, Spain

- Turned complex datasets into actionable business insights that informed business strategy and operational efficiency initiatives.

Education

Master's Degree in Data Science

Universidad de Zaragoza
